

How Does Amira Work?

PICK A STORY

Amira offers the student several appropriately difficult and engaging texts and then gives them the agency to choose what interests them for their reading session.

READ OUT LOUD

The student reads out loud to their device. Amira uses speech recognition technology to listen to the student and identify their reading skill gaps.

RECEIVE TUTORING

When the student struggles, Amira uses artificial intelligence to select from 60 micro-interventions built by reading scientists and designed to accelerate mastery of phonics, phonemic awareness, decoding, vocabulary, and comprehension.

CELEBRATE GROWTH

When they finish a story, Amira lets students know how they did and celebrates their growth.

PROVIDE DATA

Teachers, administrators, and families get detailed reports and resources tailored to support each student.

Early Reader Skills Scaffold

The Early Reader Skills Scaffold provides tutoring on foundational reading skills for our earliest readers. It follows a structured sequence designed by top reading scientists and based in the Science of Reading.

English & Spanish

Students can read with Amira in both English and Spanish, and she provides tutoring and assessment in both languages. Our research demonstrates that English Language Learners benefit even more than native English speakers.
